Shivang Chheda

shivangchheda@gmail.com | linkedin.com/in/shivang-chheda | shivangchheda.dev | Remote, India · US/EU overlap

PROFESSIONAL SUMMARY

Product engineer with 4+ years at product startups (mostly US), fully remote. I build the whole product — React and React Native front ends, Python payments backends, AWS and Terraform — and run it in production. Helped win a $100K ARR enterprise client, drove 2–3× self-serve revenue, and on a confidential AI travel platform moved production off Kubernetes with zero errors and cut AWS spend ~40%. AI-native workflow, human-accountable: I own design, review, merge and production.

CORE COMPETENCIES

Full-stack product ownership | React / React Native | Python · FastAPI | Payments & Stripe | Postgres & data safety | AWS · Terraform | Performance | AI-native engineering

WORK EXPERIENCE

Trestle

Jul 2025 – Present

Software Engineer, Frontend · developer portal · Remote (Washington)

- **Led a 13-month, ~90-ticket portal memory effort** from audit to CI guardrails: DOM nodes down **46–56% on every audited page**, with bundle-size, memory and Lighthouse budgets in Jenkins so it can't creep back.
- Traced the admin Users page leak with heap snapshots to closed MUI drawers kept mounted: memory retained per cycle **+13.3 → +0.4 MB (–97%)**, DOM nodes 13,200 → 1,220.
- Windowed a 450-row usage table in ~60 lines instead of adding a library: **450 → 19 mounted rows**, heap –53%, event listeners –65%.
- Redesigned the developer portal homepage around the API evaluation flow, driving a **2–3× increase in self-serve revenue**; rebuilt the wallet UI with clearer transaction flows and balance states.
- Hardened auth: moved tokens from localStorage to HTTP-only cookies in the Java backend (XSS) and dropped an unused cookie that cut request headers 9.6 → 6.0 KB, back under the ~8 KB limit.

Zania

Sep 2024 – Apr 2025

Software Engineer · AI compliance platform · Remote (San Francisco)

- Implemented SOC 2 Type II features inside an AI compliance agent, directly contributing to **closing a new enterprise client**.
- Built the third-party risk assessment portal in React, Next.js, MUI and Redux Toolkit / RTK Query.
- Implemented Single Sign-On (SSO) to strengthen client account security.
- Drove PR reviews to keep code quality high and reduced production bugs, working with US product and backend teams across time zones.

FactWise

Feb 2023 – Sep 2024

Frontend Engineer · procurement SaaS · Mumbai

- Owned the Bill of Materials module end to end, helping **secure a $100K ARR enterprise client**.
- Re-architected the BOM view to scale from **15 to 600 items**: recursive trees of nested items with per-node Redux selectors, so one edit re-renders one node.
- Built ag-Grid dashboards for real-time bid analysis, pricing trends and purchase decisions inside a large legacy codebase, without performance regressions.
- Led the migration of the app from React to Next.js.
- Mentored junior engineers and interns on architecture and code review until they shipped modules on their own.

Wow Rooms (Hourly Rooms)

Apr 2022 – Feb 2023

Software Development Engineer · Mumbai

- Built a **hotel search API in Go**, the platform's core search layer, which held festival peak traffic without degradation.
- Built the Extranet mobile app for hotel vendors from the ground up: bookings, inventory and real-time availability.
- Built the Node.js / Express services behind it with Prisma ORM.
- Built an internal booking management app end to end (Next.js, Express, Prisma) and deployed it on AWS with Docker.
- Designed vendor-to-operations workflows that reduced booking conflicts and made fulfilment more reliable.

SELECTED WORK & OPEN SOURCE

Confidential AI travel platform

case studies · shivangchheda.dev

Kubernetes → EC2 migration with 0 errors and ~40% lower AWS spend; automatic refund guarantee across 6 booking types; Postgres row-level security on 20 tables; sign-up failure forensics; bundle and query performance (250 → 204 KB, 8 → 1 queries/keystroke); CI revived from 158 straight failures to 15,326 passing tests.

termbridge

open source · npm

MCP server over tmux: an AI agent and a human drive one terminal, with write-lock arbitration. Bun monorepo, 600+ tests. github.com/shivang2000/termbridge

Alertforge

open source

Sentry alert → Claude triage → Claude Code fix in a worktree → reviewed draft PR. github.com/shivang2000/sentry-fixer-bot

Archestra (MCP gateway)

merged PR #3868

Code-block copy buttons in an MCP gateway, reusing its CodeBlock pair, with tests. archestra-ai/archestra#3868

EDUCATION

B.E. Computer Engineering — University of Mumbai 2022

SKILLS

Product: TypeScript, React 19, Next.js, React Native / Expo, Redux, Tailwind · Python, FastAPI, Node.js, Go, Java · Stripe, Redis
Infra & AI: Postgres (RLS, locking), Terraform, AWS, Cloudflare, Docker, GitHub Actions, Sentry, PostHog, Chrome DevTools · Claude Code agents, MCP
